

Reliable, dedicated, accurate – maintaining your utility's digital asset data for enhanced operations.

Extend your GIS workforce with a dedicated team to assist in data upkeep initiatives where and when you need support.

Consistent data maintenance supports daily operations and makes high-value enterprise systems possible through enhanced data fidelity and currency.

Whether you need help with supplementary backlog support, emergency management spikes, or routine maintenance, our Data Maintenance service equips your utility with dedicated work order posting reinforcement throughout all stages of the project lifecycle for systems as-designed or as-built.

We have capability to support a variety of organizations and data challenges.

Gas Distribution and Transmission
Electric Distribution and Transmission
Fiber Management
Water Distribution

Our experience with delivering intricate data projects and our proven methods for achieving high quality enable us to manage challenging work on time. We leverage our automation tools where possible to help streamline your utility's business process workflows.

Key Features & Benefits

Gain a Dedicated Team

Extend your data workforce with an agile team to provide support where and when you need it; alleviate the stress of managing resource changes.

Ensure Data Currency

Drive high-value company initiatives with reliable, accurate data; provide downstream LOBs with up-to-date data for safer and more efficient operations.

Refocus Internal Resources

Let your internal staff tackle the more complex business initiatives, while we take care of the day-in-day-out routine work.

Keep a Pulse on Work Order Status

Mobilize internal staff to respond to emergency upticks without missing a beat in daily mapping work; leverage UDC GIS Specialists for spikes as needed.

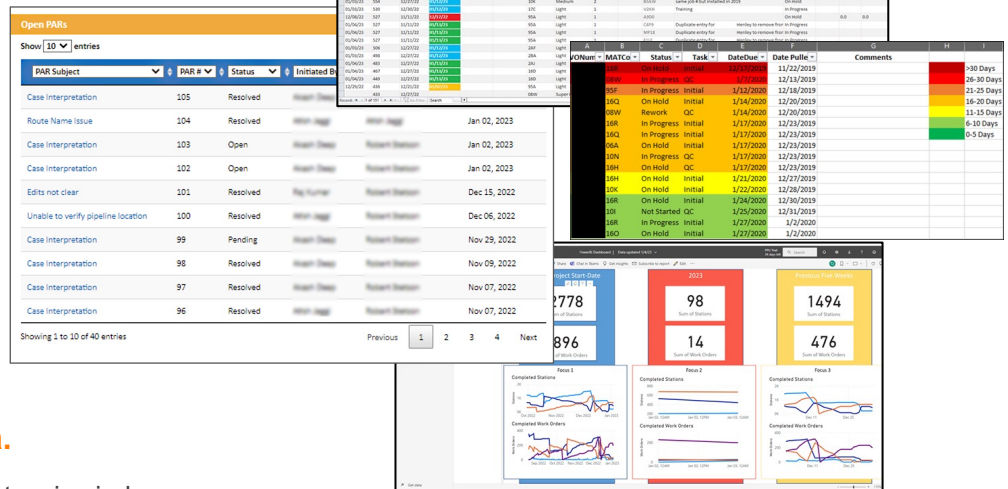

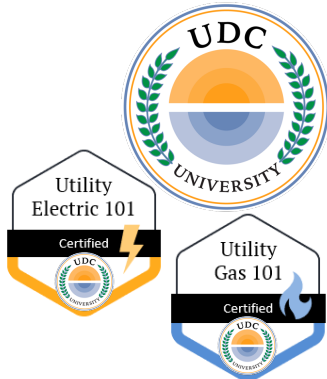

Leverage Industry Professionals

Enhance your team with GIS Specialists that know your data and business processes to help manage the interconnectivity of your assets and systems.

UDC Tools for Success

High-quality data and customer satisfaction are the keystones of our projects.

Our work quality is a direct result of our people, customized tools, long-standing processes, and communication cadences. We tailor our quality control communication mechanisms to the focuses of our clients and their specific reporting needs.

We understand your data.

UDC GIS Specialists undergo extensive in-house GIS and utility training, providing our team with the foundational expertise and knowledge to effectively manage the flow of your data and downstream systems.

Scope of Work

Data Maintenance Records Management

There are three primary phases to helping you reach and/or maintain steady state.

- 01 **Initial Phase (Project Startup)**
Establish project logistics
Review documentation and work samples
Create specification document
- 02 **Pilot Phase (Proof of Process)**
Conduct pilot using source assortment
Implement feedback
- 03 **Production Phase**
Train additional staff
Perform posting, QAQC, and/or DAT

Next Steps

Take the first step to better supporting your data team and making your data goals reality.

We invite you to contact us to talk about your business process challenges and to see how we can help.
